physician adoption of electronic medical records emrs has become a national priority it is said that emrs have the potential to greatly improve patient care to provide the data needed for more effective population management and quality assurance of both an individual practice s patients and well as patients of large health care systems and the potential to create efficiencies that allow physicians to provide this improved care at a far lower cost than at present there is currently a strong u s government push for physicians to adopt emr technology with the obama administration

emphasizing the use of emrs as an important part of the future of health care and urging widespread adoption of this technology by 2014 this timely book for the primary care community offers a concise and easy to read guide for implementing an emr system organized in six sections this invaluable title details the general state of the emr landscape covering the government s incentive program promises and pitfalls of emr technology issues related to standardization and the range of emr vendors from which a provider can choose importantly chapter two provides a detailed and highly instructional account of the experiences that a range of primary care providers have had in implementing emr systems chapter three discusses how to effectively choose an emr system while chapters four and five cover all of the vital pre implementation and implementation issues in establishing an emr system in the primary care environment finally chapter six discusses how to optimize and maintain a new emr system to achieve the full cost savings desired concise direct but above all honest in recognizing the challenges in choosing and implementing an electronic health record in primary care electronic medical records a practical guide for primary care has been written with the busy primary care physician in mind

physician productivity is an important driver of key healthcare outcomes such as quality of care treatment costs and patient satisfaction because physicians influence a vast majority of treatment decisions and are central to the care delivery process thus it is critical for researchers to understand how transformation technologies such as electronic medical records emrs impact physician productivity while researchers and policy makers in the united states have suggested that the implementation of emrs can have significant beneficial impacts on patient safety health care quality and overall costs of care delivery the effects of emrs on physicians themselves have been understudied in the literature in this paper we examine the productivity impacts of emr implementation on physicians our focus is to investigate if productivity impacts of emr implementation depend on physician specialties and the duration for which the emr has been implemented this research is informed by extant work in physician productivity it productivity and task technology fit theory we use a unique panel dataset comprising 87 physicians specializing in internal medicine pediatrics and family practice in 12 primary care clinics of an academic hospital in a large state in the western united states our dataset contains 3 186 physician month productivity observations collected over 39 months we employ random effects model on this panel dataset to estimate the impact of emr implementation on physician productivity we find that productivity impacts of emr are contingent upon physician specialty and the time period for which an emr has been implemented furthermore we find that the stable stage impacts of emr on various specialties are different from those in the transitory learning stage these results emphasize the need for fine grained analyses of productivity impacts of emr implementation on physicians we postulate that the fit provided by an emr to the task requirements of physicians of various specialties is key to disentangling the productivity dynamics we contribute to the nascent but emerging stream of literature that examines productivity implications of various information technologies among white color knowledge workers in the service industries
